Q: Which methods to use when comparing elements in two ArrayLists? I have one arraylist in which i want to compare to another arraylist which are stored the usernames. If the username already exists in the arraylist then update the user and another arraylist of the loggedin users will be appended. But when i searched to find how to use.add(s) i found multiple ways like using.contains or.indexOf. But my main problem in my case is when i get two equal usernames I cannot use.contains because the first element is equal but in the next element the first element isn't equal so how can i compare that? A: you can use: 1) for checking if user exists in that arraylist(where only one to many comparison occurs) if (oldList.contains(newUsername) {//do some thing} 2) for checking if the same user exists in two different arraylist(where many to many comparison occurs) ArrayList list1 = new ArrayList(); for(User u: list1){ if(list1.contains(u)){ //or if(list1.contains(list2.get(list1.indexOf(u))) //or //and so on } list2.add(u); } Q: Is there a way to get ASIHTTPRequest 4 working with the latest iOS SDK on 2.3.1? I have been building a web service for
