Figures, including both dimensions and cross sections, are clearly presented. The detailed notes clearly describes the steps involved in the finite element analysis. The mathematical formulas used for stress and strain calculations are easily understood. A perfect example of the ease of reading and the explanatory power of this workbook is the detailed presentation of the finite element analysis (FEA) of an artificial metatarsophalangeal (MTP) joint. The step-by-step instructions for running the finite element analysis involve only a few simple steps. The steps outlined are easy to understand and perform. Even a first year undergraduate student can easily master the finite element analysis of the artificial MTP joint. The authors have introduced the basics of finite element analysis (Finite Element). The authors have also provided two case studies that are mainly relevant to the engineering field. The examples are of 2D and 3D analysis of the artificial MTP joint. The 3D FEA is used to analyze the problem of relative motion of the tibial and MTP joint components with respect to the mechanical force in an external environment. The 2D analysis is carried out to determine the stress and strain distribution in the fibular bone. Both the examples provide a clear picture of the basics of finite element analysis. This is an excellent book for the undergraduate and graduate students who want to learn the basics of finite element analysis. The research scholars and engineering professionals will find this book very useful as a reference material. \*\*Publisher's Note\*\* Springer Nature remains neutral with regard to jurisdictional claims in published maps and institutional affiliations. Q: What does "waer" mean in "WAE-AR"? To me, "WAE" and "AR" are, respectively, a wild animal and a reclaimed area. So, I thought that "WAER" is the same as "WAE-AR", meaning "wild animal/reclaimed area area" or "animal/area area". However, the answer is given as "wild animal area". I'm lost now. What does "WAER" mean? A: WAE is an archaic word for water, which can either be a wild river or a piece of land. You could compare it to the word 'flood'. AR is the part of the area of reclamation that was removed from the water, which may include the human
